

ASPEN D

100% renewable diesel for smaller diesel engines

Aspen D is 100% renewable diesel, developed for smaller diesel machinery with simple or no exhaust gas cleaning. The fuel can be used, for example, in soil compactors, mini diggers, generators, compressors, lifts, lawn mowers, tool carriers, forklift trucks, hot water washers and diesel heaters. Aspen D can be stored for three or four times longer than normal Swedish or European diesel. It offers increased reliability while simultaneously reducing the risk of clogged filters, injectors and engine failures. Aspen D is also guaranteed free of RME and palm oil.

Areas of use

Units

Available in packaging of 5L, 25L and 200L
